

Monkeypox Vaccine Side Effects

The CDC has recommended that certain at-risk individuals receive vaccine for monkeypox. There are two monkeypox vaccines available for use in the US, however **JYNNEOS** is recommended. Although JYNNEOS is developed as smallpox vaccines, it is effective in preventing monkeypox! *Please note, vaccine side effects for JYNNEOS include...*

Pain, swelling, and/or redness at the injection site

Headache, muscle pain, chills, or fatigue

Fever

Nausea

Visit www.phila.gov and search “monkeypox” for more information!
