

COVID-19 Vaccine Beyond-Use Date/Time (BUD) Tracking Labels

Pfizer 12+ Bivalent BUD Vial Labels Instruction Sheet

The Philadelphia Department of Public Health (PDPH) has created vial labels for **Pfizer 12+ Bivalent COVID-19** vaccine vials. These labels should be used to identify when a vial was first punctured and when it should be discarded.

Prior to using any vaccine, check the product expiration and beyond use date. **Never use expired vaccine. Never use vaccine after the beyond-use date or times.** Follow the instructions for each vaccine product to calculate the time the vial must be discarded.

Managing Your COVID-19 Vaccine Vials

1. Remove the vaccine vial from the refrigerator. Follow manufacturer preparation instructions.
2. Complete the information on the vial label. Record the lot number, name of staff person who first punctures the vial, and the date/time of the dilution.
3. Pfizer orange cap COVID-19 vaccine may be stored at room temperature (33°F-77°F or 2°C-25°C) for up to 12 hours. **Any vaccine remaining after 12 hours must be discarded** (scan the orange QR code to access our Wastage Guide).
4. For full and up to date preparation details please see manufacturer healthcare provider EUA by clicking the link to the right.
